

Vicente Juárez

Full-Stack Software Engineer

Santiago, Chile • vijuarez97@gmail.com • vijuarez.dev • github.com/vijuarez

Skills

Programming Languages: Ruby, Python, TypeScript, Dart, SQL

Frameworks & Libraries: Ruby on Rails, Flask, React, Flutter

Infrastructure & Databases: Google Cloud Platform, Docker, PostgreSQL, Redis

Observability & Testing: Cloud Monitoring, New Relic, Playwright, RSpec, pytest

Human Languages: Spanish (Native), English (C2 Proficient)

Experience

Aprendo y Arriendo - Government-backed research initiative, PUC & FEN, 20k+ seasonal users Remote - Santiago, Chile

Consultant - Technical Lead

2023 - Present

- Sole engineer and technical owner: Set all architecture, standards, and tooling. Managed the technical relationship with two principal investigators and served as the technical contact for government stakeholders. Onboarded research assistants and supervised 2 junior engineers.
- Web scraping infrastructure in Python (300k+ listings bi-weekly): Playwright for JS-rendered content, rate limiting, checkpoint recovery, proxy and signature rotation. Shipped React dashboard for non-technical stakeholders to schedule and monitor jobs.
- Full-stack AI application: Flutter UI, Python/Flask backend with Gemini API integration and custom RAG system tuned and validated against domain expert benchmarks. Deployed to hundreds of government employees to optimize their work related to the national housing stipend.
- VPS to GCP migration: Rails API and worker tiers on Cloud Run with distinct autoscaling profiles, Cloud Tasks for async jobs (10-hour campaigns, 20k+ emails), structured observability, 99.95 % uptime. CI/CD via CircleCI.

Consultant - Full-Stack Software Engineer

2021 - 2023

- Government-backed research initiative with 20k+ seasonal users: progressed from backend individual contributor to primary engineer, taking ownership of production data, compliance requirements, and full-stack development and maintenance.
- Inherited legacy Rails codebase with feature gaps: rewrote core architecture and shipped as production platform. Owned full stack (API, frontend, deployment, data pipelines) with government integration and security compliance.
- Data & security architecture (Rails/Python): field-level PII encryption with role-based decryption policies; dbt pipeline + Looker dashboards decoupling analytics from production.
- Feature backends: node-based workflow editor for campaign rule logic; optimized PostGIS spatial queries powering a Google Maps quality-of-life frontend.
- Frontend development (Angular): shipped features post-lead departure, maintained component library, implemented New Relic observability for web vitals debugging, and integrated Rudderstack for user behavior tracking.

Various Clients

Santiago, Chile

Freelance Developer

2020

- Delivery of 4 end-to-end projects: e-commerce (WooCommerce, PayPal), Rails deployments on self-managed VPS, and Selenium-based (Python) web automation for market research (JS-rendered sites, rate-limiting, proxy handling)

Pontificia Universidad Católica de Chile

Santiago, Chile

Teaching Assistant - Python

2017 - 2019

- Selected by faculty as Teaching Assistant on Intro to Programming and Advanced Programming (Python)

- Designed evaluations covering algorithm design, data structures, optimization, and software design principles. Held weekly tutoring sessions for 50+ students.

Education

Pontificia Universidad Católica de Chile

Santiago, Chile

Bachelor of Science in Engineering

2021

- Major in Computing and Information Systems - Computing Track.
- Minor in Scientific and Technological Foundations of Computing.
